

**Advanced,
experienced &
compassionate
care focused
on you.**

Women's Health

*Women have special
healthcare needs. And those
needs continue changing
throughout your lifetime. At
Mountain View Medical Center,
we recognize the importance
of providing care that meets
these needs, which is why we
developed a robust Women's
Health program.*

**Compassionate, dedicated care
& broad Women's Health services.**

At Mountain View Medical Center, our Women's Health program is designed around our longstanding commitment to excellence, responsibility and genuine concern and compassion. This means we treat you with individualized attention, total focus and a caring heart. It also means we offer a wide range of services, some uncommon in family practices, to ensure we're taking the best possible care of our patients. Here are some of the services and care we provide as part of our Women's Health program:

- Well-woman exams
- Birth control & family planning
- Pap smear
- Colposcopy
- Bone density/DXA scan
- Menopause counseling
- Postmenopausal hormone therapy
- Wellness, nutrition & lifestyle counseling

**Skilled, focused professionals
committed to excellence... & efficiency!**

Led by certified nurse-practitioner Karen Kirwan, NP and Darcy Butcher, NP, our program reflects a female perspective and understanding. Karen and Darcy are both highly experienced in women's health and certified in bone densitometry, used to measure osteoporosis risk. Also, Mountain View Medical Center's founder Dr. Tim Gray wrote the book "Osteoporosis-The Silent Stalker; The Women's Illustrated Health Care Guide to Preventing and Reversing Osteoporosis."

Just as it is behind our focus on Women's Health, our commitment to excellence is behind our uniquely efficient care. In our quest to raise the bar in family medicine, we are always analyzing how well our office runs and making improvements to ensure we can see you at your appointed time and ensure the best experience and care.
